“As a business owner, you don't have time to waste on technical issues. You just want your stuff to work. That's where we shine! Call us today to put an end to your I.T. frustrations!”
 - Jim Stackhouse
 NeoLore Networks Inc.

Why Hiring the Cheapest Computer Support Company Will Actually Cost You More

As anybody working in IT will tell you, the most common question we get isn't, “Why is my computer running so slowly?” or “Why is my Internet not working?” It's “What do you charge for your services?” With so many IT companies clamoring for your attention, it makes sense that you'd want to look for the most inexpensive, cost-efficient option, right?

fact that good technology forms the pillars upon which successful companies stand. Many business owners still insist on cutting corners with IT, hiring cheap and inexperienced “professionals” to protect and support the most fundamental aspects of their operation.

Of course, it's hard to fault them for doing so. Without a firm grasp of a business's IT needs, it's all too easy for a subpar, would-be IT partner to convince an owner they meet the company's requirements. That's why the question, “What will I get for my money?” is so important. IT support coverage needs to be comprehensive, addressing every potential sink-or-swim crisis before it actually happens. The integrity of your network infrastructure should support your business, rather than force you to run around putting out fires.

A downed server or temporarily unreliable network might seem like minor issues, but even the smallest of IT problems can

least a few more years. But when an employee tries to access the database, an error pops up. Upon further investigation, it turns out the outdated server has finally broken down, apparently

requires constant, behind-the-scenes monitoring and maintenance to ensure it stays up and running, not to mention secure.

From hordes of hackers waiting in the wings for you to slip up, to hardware failure, to natural disasters, rogue employees and a million other IT threats, it's important to ensure the stability of your network before a problem comes knocking. Cheap Band-Aid solutions work great until the day they cost you thousands. It's better to invest in a team of real IT experts, and avoid crisis altogether. It's much cheaper to prevent something from breaking than it is to replace it altogether.

for good. All those documents, all that data instrumental to the basic functionality of the company, is irrecoverable – thousands of hours of work (and thousands of dollars) down the drain, and all because of an issue that would easily have been caught and prevented by a team of qualified IT experts.

When technology works, it's easy to imagine that it'll continue working without issue. But the fact is that a computer network

The problem is that this question doesn't get to the heart of the issue. Sure, any IT company can offer rock-bottom prices, but as with anything else, those savings are going to come with fewer, lower-quality IT services. Also, many cheaper companies say they are inexpensive, but they

typically have slow response times and nickel and dime you over everything. Instead of asking about price right off the bat, the better question is, “What will I get for my money?”

With cheapo IT companies, the answer is not much. Maybe they'll be there when the server breaks down or if Microsoft Word is acting weird on your computer. But you can bet they won't help you implement IT systems that will prevent real, catastrophic issues from arising – the kinds of things that determine the success or failure of a company at the most basic level.

Today, business and technology go hand in hand. It's an inescapable

easily snowball into an expensive nightmare that threatens your company's very existence.

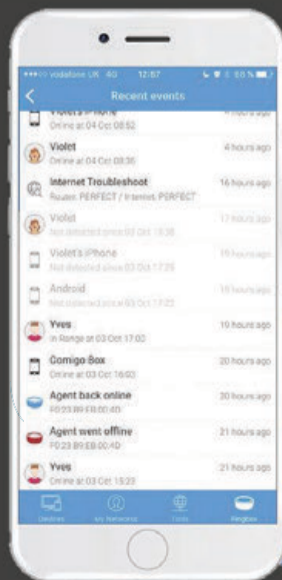

Take a company that stores all its data on a central, networked server, for example. Maybe they're a content creation firm, with terabytes of custom designed client marketing materials stashed away, or a large law practice with thousands of vital case documents. They were reluctant to spend much on IT support, so they went with the cheapest option available. Of course,

regular server maintenance wasn't included in their package, but they assumed their trusty hardware would keep kicking for at

Shiny New Gadget Of The Month: Fingbox

The Home Network Security System

There are no limits to what this device can do. It can protect your home by tracking who is online, limit internet access and you can see what each device is doing and the history of sites visited. It also gives parents a helping hand by detecting Wi-Fi attacks, monitor surrounding devices to see what websites your children are on and can also block intruders. Fingbox can also improve your network performance by finding Wi-Fi sweet spots, discover bandwidth hogging devices and can even test your internet speed. To find out more, visit <https://www.fing.io/fingbox>.

Run Your Next Meeting Like A CEO

As both a CEO for a couple of decades and a humble bystander, I've grown to appreciate the fine art of how to run a meeting well. I have seen billionaire tech CEOs run meetings where people cried their eyes out they were so inspired, and I've seen frontline supervisors at an aluminum can manufacturing company run meetings so poorly that people were falling asleep, heads clunking down on the table.

Want to run your next meeting like a CEO? Here are three ways experts avoid rookie mistakes and elevate their meetings to the next level.

1. Make an agenda with three simple questions. This is an absolute ninja level of CEO wizardry. As many authors have said, success comes not when you have all the answers, but when you ask all the right questions. Show you have CEO swagger and print on a piece of paper (and include in the online

calendar appointment) three simple questions for the itinerary. Simple questions make valuable meetings.

2. Summarize key points you hear. Meetings get sidetracked when lots of people are talking and nobody is summarizing key points as you go. Great leaders often pause naturally about every 10 minutes and take the time to summarize the key points they're hearing. Little statements like, "It sounds like one big conclusion we are making is X" or, "One big question I hear us asking is Y" can have a tremendous impact. Right after these summary statements, you'll see the conversation turn toward a decision point and boom – a decision is made.

3. Make people feel safe. I once heard a governor tell a skittish junior staffer, "Tell me more about what you mean by that. I want to understand." On another occasion, a CEO told a new member of her team, "I am not

promising I'm going to share your point of view, but I want to understand it. So tell me more." The best CEOs don't want to intimidate people in meetings. Instead, they make people feel safe, so that everyone feels open to sharing useful information without fear of retribution or being made to look stupid. Make people feel respected, heard and appreciated, and you'll be impressed by the value of the information you learn, and the solutions that come from your team.

Which Social Network Do Teens Use More Than Any Other? The Answer May Surprise You...

If you're over, say, 30 years old, it's likely that you've missed the latest trend in social media. These days, Facebook marketing is all the rage as businesses attempt to get a grip on the changing media landscape in order to zero in on their demographic. But, it looks like Facebook's on its way to becoming "so 2015," at least for one key group – American teens.

Perhaps in response to their parents, aunts and uncles flooding the service, lately teens have been fleeing Facebook in droves and migrating to the greener pastures of Snapchat. This is according to Piper Jaffray's biannual "Taking Stock with the Teens" survey, which reports that 47% of teens now consider Snapchat their favorite social network, with Facebook clocking a meager 9%.

How To Prevent Hackers From Stealing Your Phone Data

Unfortunately, even though you keep an enormous amount of personal data on your phone, most phones don't have any security software. To combat this, update your phone's operating system at the earliest opportunity. Then, set up an auto-lock system, backed by a six-digit passcode. Ditch as many apps as possible with access to your camera, contacts and email. And when you're out and about on the town, disable WiFi and Bluetooth. At the very least, adjust the settings to stop your phone from connecting to unprotected networks. Next time you're at Starbucks getting some work done, absolutely don't enter any passwords or credit card numbers until you're back home. *Inc.com 10/3/2017*

Successful Leaders Never, Ever Do These Things

Any good leader is constantly striving to elevate their skills, draw their team together, and steer the ship to profits and success. But even the most vigilant bosses often make some basic mistakes, most of which come down to one often-neglected fact: a good leader's primary concern should always be to serve the needs of their people.

Too many business owners fail to realize that their employees are real people, not just instruments or machines you can exploit to elevate you to the top. A topdown structure will always eventually fail, while a collaborative, participatory structure can only grow stronger as it ages and expands.

No matter how smart a leader is, they don't have all the answers. Intelligent leaders treat their fellow idea-makers as their most important asset, valuing input and creativity, and they're available to communicate with the team. *Inc.com 10/13/2017*

NeoTip: General Keyboarding Tricks

Accidentally closed a tab? Press Ctrl+Shift+T to reopen the most recently closed tab and get back what you were doing.

Window Snapping & Multiple Monitor Control: Pressing the Windows Key + Arrow Keys will cause a window to quickly snap to each side of either monitor. Alternatively, pressing Shift + Windows Key + Arrows will cause the window to jump to the other monitor. Windows + P will allow you to set up a second display or projector.

YouTube keyboard shortcuts: Spacebar will pause a YouTube video (will only work when focus is on that window). Also try K for pausing, J and L will rewind/fast forward 10 second, M will work for muting.

Free Report Download: What You Should Expect To Pay For IT Support For Your Small Business

IT BUYERS GUIDE

What Every Business Owner MUST Know About IT Support Services And Fees

What You Should Expect To Pay For IT Support For Your Business And How To Get Exactly What You Need

You'll learn: • The three most common ways IT companies charge for their services and the pros and cons of each approach. • A common billing model that puts ALL THE RISK on you, the customer, when buying IT services; you'll learn what it is and why you need to avoid agreeing to it. • Exclusions, hidden fees and other "gotcha" clauses IT companies put in their contracts that you DON'T want to agree to. • How to make sure you know exactly what you're getting to avoid disappointment, frustration and added costs later on that you didn't anticipate.
